

Aniket Vyas

Flutter Developer | Full-Stack Mobile Engineer | Firebase & Flame Engine

aniketishere1@gmail.com

+91 9511524007

Jodhpur, Rajasthan, India

github.com/Aniket-Vyass

PROFESSIONAL SUMMARY

Self-driven Flutter developer with hands-on experience building production-grade mobile applications from scratch — including a live social media platform currently in active user testing. Proven ability to own the full product lifecycle: UI architecture, Firebase backend integration, real-time data, and deployment. Entrepreneurial background running a profitable retail business since 2019 demonstrates strong product ownership and delivery mindset. Experienced with Flame game engine for Flutter, REST API consumption, and rapid prototyping. Ready to lead an 8-week prototype phase solo and scale with a team.

TECHNICAL SKILLS

Mobile	Flutter (primary), Dart, Flame Engine (game dev)
Backend & Cloud	Firebase (Auth, Firestore, Cloud Storage, Realtime DB)
API Integration	REST API consumption, HTTP/Dio packages, JSON parsing, JWT auth headers
State Management	Bloc / Cubit, Provider
UI/UX	Custom widgets, animations, responsive layouts, pixel-perfect UI cloning
Tools & Dev	Git, GitHub, VS Code, Android Studio, Firebase App Distribution
Entrepreneurship	Product ownership, business operations, P&L; management (Muskan Motors, est. 2019)

PROJECTS

Small Social Media App

Stack: Flutter · Firebase Auth · Firestore · Cloud Storage · Bloc | Live — Active User Testing (14-day cycle)

- Built end-to-end social platform from scratch: user auth, post feed, likes, comments, profile management.
- Architected full Firebase backend — Firestore for real-time data, Cloud Storage for media, Auth for user management.
- Deployed to real testers via Firebase App Distribution; managing active 14-day testing cycle with multiple users.
- Demonstrates complete product ownership: design, development, backend, testing, and iteration — solo.

Face-Replace Mario Game

Stack: Flutter · Flame Engine · Image Processing | Working Prototype — Minor Fixes Remaining

- Built a fully playable Mario game in Flutter using the Flame game engine with physics, collision, and enemy AI.
- Implemented custom face-replacement feature: user uploads a background-removed face image which is dynamically mapped onto Mario's head.
- Face tracks all character animations — running left/right, jumping, attacking — with pixel-accurate placement.
- Demonstrates advanced Flutter capability beyond standard app development: game loops, sprite rendering, image compositing.

Blinkit UI Clone

Stack: Flutter · Custom UI Components | Frontend UI Prototype

- Recreated the full Blinkit app interface in Flutter with pixel-perfect accuracy.
- Demonstrates ability to rapidly prototype and deliver polished UI — directly relevant to 8-week prototype targets.

Flutter Catalog App

Stack: Flutter | Personal Project · github.com/Aniket-Vyass/flutter_catalog_app

- Product catalog application showcasing Flutter UI patterns, navigation, and state handling.

EXPERIENCE

Founder & Director — Muskan Motors

Self-employed | Jodhpur, Rajasthan | 2019 – Present

- Founded and operated a profitable retail business from the ground up — managed operations, vendor relations, finances, and customer experience independently.
- Demonstrates strong product ownership, business acumen, and the ability to deliver results without supervision — directly transferable to leading a solo prototype phase.
- Actively transitioning to full-time software development; business will continue under family management.

WHY THIS ROLE — DIRECT FIT

- **End-to-end product builder:** Built and shipped a complete social media app solo — exactly the profile needed for the 8-week solo prototype.
- **Real Flutter depth:** Not tutorial projects — a live app with real testers, a working game with Flame engine, and pixel-perfect UI clones.
- **Backend capable:** Firebase covers auth, real-time database, file storage, and cloud functions — equivalent skill set to consuming Java REST APIs.
- **API integration ready:** Experienced with REST API calls from Flutter (HTTP/Dio), JSON handling, and auth headers — Java backend APIs work identically.
- **AI tooling fluent:** Comfortable with Claude Code and Copilot-assisted development — maximises solo productivity during prototype phase.
- **Ownership mindset:** Running a profitable business since age ~18 proves ability to take full responsibility and deliver without hand-holding.
